

Progress on the Projects (in August 2022)

- **73 ISPs** have participated in the projects.
- A survey on about **112 million IP addresses** of the ISPs was conducted.
- **NOTICE: 4,381** devices were **detected** and ISPs have been notified.
- **NICTER: 1,550**(daily avg.) devices were **detected** and ISPs have been notified.

Results of the "NOTICE" Project

Number of IP addresses which were successfully logged-in to with weak password settings and were subject to user alert

4,381 (in July: 4,506)

Ref) Total number from FY2019:52,617

Devices in which password could be entered:189 thousand

Results of the NICTER-Alert Project*

* Project to alert users of IoT devices infected with malware

Number of IP addresses which seem to be infected with malware and were subject to user alert

1,550 (daily avg.) (in July: 2,550)

Ref) Overall period: 392 daily avg.

Min: 40 (Feb. 10, 2021) / Max: 3,288 (Jun. 6, 2022)

Increasing factors:

Enhancement of survey programs and expansion of survey target addresses

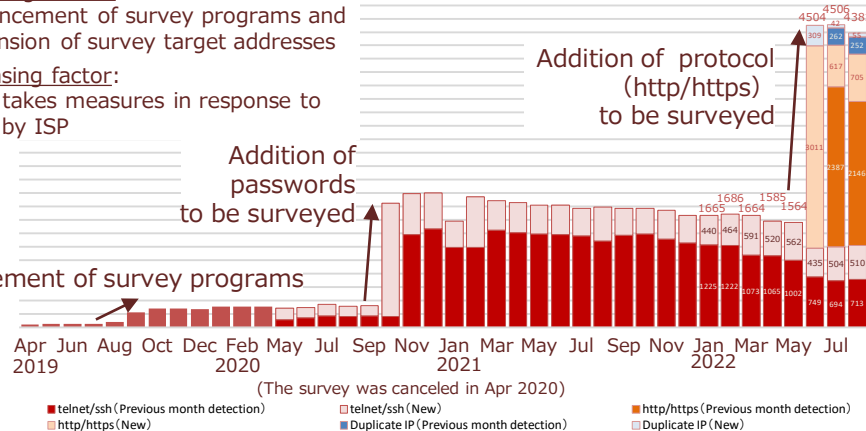

Decreasing factor:

User takes measures in response to alert by ISP

Addition of passwords to be surveyed

Addition of protocol (http/https) to be surveyed

Enhancement of survey programs

Specific increase due to frequent changes in the IP address of some devices
