

# Progress on the Projects (in June 2023)

- **78 ISPs** have participated in the projects.
- A survey on about **112 million IP addresses** of the ISPs was conducted.
- **NOTICE: 5,063** devices were **detected** and ISPs have been notified.
- **NICTER: 571**(daily avg.) devices were **detected** and ISPs have been notified.

## Results of the "NOTICE" Project

Number of IP addresses which were successfully logged-in to with weak password settings and were subject to user alert

**5,063** (in May: 4,888)

Ref) Total number from FY2019:97,386

Devices in which password could be entered:258 thousand

### Increasing factors:

Enhancement of survey programs and expansion of survey target addresses

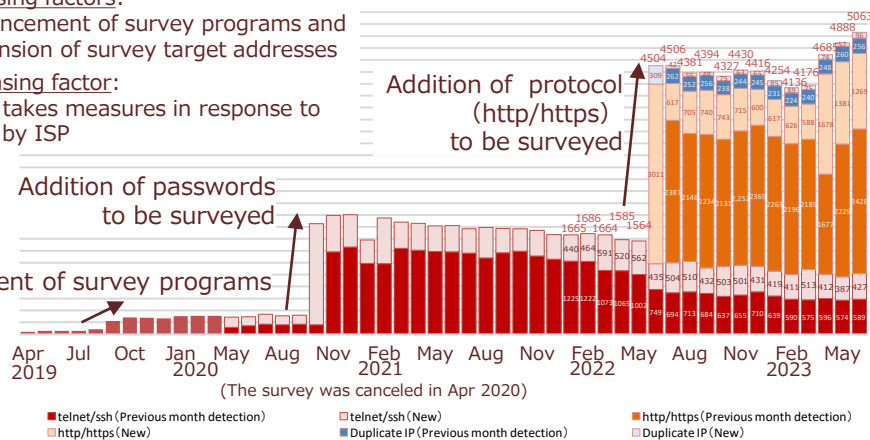

### Decreasing factor:

User takes measures in response to alert by ISP

Addition of passwords to be surveyed

Addition of protocol (http/https) to be surveyed

Enhancement of survey programs

## Results of the NICTER-Alert Project\*

\* Project to alert users of IoT devices infected with malware

Number of IP addresses which seem to be infected with malware and were subject to user alert

**571** (daily avg.) (in May: 533)

Ref) Overall period: 445 daily avg.

Min: 40 (Feb. 10, 2021) / Max: 3,288 (Jun. 6, 2022)
